

Track Geometry

The Lennings / Vogel & Plotch track geometry measurement road – rail system is a low production but effective system for measuring basic track geometry parameters.

Measurements are recorded at down to 250mm intervals and stored electronically for later analysis. Reports can be customized to suit the client's requirements.

Parameters Recorded:

- Track Gauge
- Track Cant
- Track Twist
- Vertical Profile
- Horizontal Profile

Rate of change of Horizontal Profile

Reports Available:

- Strip Chart of all Parameters
- Summary of defects per kilometre
- Section Summary
- Distribution of Defects
